Name: Phoebe
Chart No: N
Owner: Shown Carla
Doctor: Dr. D Gribskov

Species: Canine
Breed: Poodle
Age: 2Y
Sex: F

Hospital:

Aloha Dog & Cat Hospital
17335 SW Tualatin Valley
Aloha, OR 97006
Antech ID: 46025

Lab:

ANTECH Diagnostics
12067 NE Glenn Widing
Portland, OR 97220
Reported: 07/21/11 03:10
Received: 07/18/11

Accession No. POBC23286384	Doctor Dr. D Gribskov	Owner Shown Carla	Pet Name Phoebe
Test	Results	Adult Reference Range	L Normal H
Von Willebrand Factor			

Von Willebrand	72	70-180 %
----------------	----	----------

- - - - - INTERPRETIVE COMMENT - - - - -

Dogs with von Willebrand's factor (vWF) between 35% and 50% are considered abnormal but not as likely to have bleeding problems as dogs with less than 35% von Willebrand's factor activity.

Dogs with 50-69% vWF are considered borderline normal. These dogs may be carriers of von Willebrand's disease, but are unlikely to have abnormal bleeding. . A thrombin clotting time (TCT) is performed on samples with low vWf concentrations, to evaluate sample integrity. If prolonged (>9s), this result will be reported. A prolonged TCT indicates that sample clotting has occurred which will spuriously lower the vWF concentration. . Test performed at CORNELL UNIVERSITY - - - - -
